

Within a short 26 years, the United States expects to add 100 million people by 2035.

All totaled, human beings expect to grow from 6.8 billion in 2009 to reach 7.0 billion in 2011. From there, census reports show humans expanding by another 2.0 and possibly 3.0 billion within 40 years.

STAGGERING INDIFFERENCE OF MEDIA, LEADERS AND CITIZENS IN USA

In America, human population numbers add 3.4 million annually to our already unsustainable society—on our way to an added 100 million by 2035. We suffer carrying capacity issues as to water, energy and food—yet not a peep by the media. News outlets report on “greening” our future, hybrid cars and conservation—but they refuse to deal with the granddaddy of all our problems: hyper-population growth.
