

Are Diabetes And Insulin Resistance Really Reversible?

Saturday, 08 August 2009 19:51 -

Diabetes is not reversible and controlling your blood sugar with drugs or insulin will protect you from organ damage and death.

That is what the medical profession would have you believe, but medication and insulin can actually increase your risk getting a heart attack or dying. The diabetes epidemic is accelerating along with the obesity epidemic, and what you are not hearing about is another way to treat it.
