

Pay special attention to the strains of the H1N1 noted in the 2007 filing. Coming to your hometown soon!

The following is my reply to John Perna per a US Patent Application filed, with one aspect of the patent being for the Swine Flue virus vaccine (H1N1). The patent application was filed long before the Mexican Swine Flu supposedly came forward as a new strain of virus coming out of a "Pig Farm" in Mexico.

In John's post copied in part below my reply, he thought the patent application for the H1N1 vaccine was from 2008 shortly before the swine flue broke out in Mexico.

I am familiar with patents, so I took a look at the US Patent and Trademark site to verify what he was bringing forward was correct and found he was in error. The original application was actually filed in 2007. Long before the virus was staged as an outbreak of "a new viral strain" in Mexico.

[Here is the US Patent office link to see that patent:](#)
