

The idea that the fluoride added to municipal water supplies is "natural" is a common myth. While Calcium Fluoride is the 5th most abundant element in the Earth's crust, it is Sodium Fluoride (Sodium Hexafluorosilicate), a toxic by-product of Aluminum production, that is added to the drinking water of most states in the U.S.

Sodium Fluoride has been shown to cause brain damage, ADD, Alzheimer's disease, various types of cancer, kidney problems, thyroid problems and (ironically) tooth problems. An uninformed man was shown on Channel 9 complaining that his children would no longer have the fluoride that they need for their teeth.
