

A judge of the New Jersey Superior Court has prohibited the scheduled release of a report on the security and accuracy of the Sequoia AVC Advantage voting machine. Last June, Judge Linda Feinberg ordered Sequoia Voting Systems to turn over its source code to me (serving as an expert witness, assisted by a team of computer scientists) for a thorough examination. At that time she also ordered that we could publish our report 30 days after delivering it to the Court--which should have been today.

TVNL Comment: And we the people should suppress this judge's oxygen supply!
