

Some estimates are that over a 30-year period, as many as 1 million people were exposed to well water that contained trichloroethylene (TCE), tetrachloroethylene (PCE), benzene and vinyl chloride. The chemicals were dumped into storm drains, leaked from fuel tanks or buried in pits across the base. They seeped through the groundwater and into the wells that fed the base areas of Hadnot Point and Tarawa Terrace.

A 2007 law required the Marine Corps to warn former residents of the potential danger, but many, such as Akers, say they've never been contacted.
